

IR 390 & 590

5-year update

Date: 2016

Location: Rochester, NY

Advantage: Longevity

Technical Specifications

Fiber: FORTA-FI[®]

Existing Pavement: Composite Roadway

Application: Mill & Fill, FDR

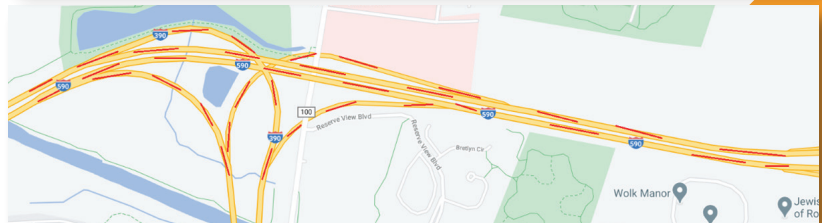

Climate: High Freeze -Thaw Cycles

This three-part project using **FORTA-FI reinforcement fibers** included a full-depth reclamation at Interstate Route 390, a saw & sealed portion of Interstate Route 590 from Winton Rd to State Route 31, and a 2" direct overlay on IR 590 from IR 390 to Winton Rd.

UPDATE

After 5 years the roadway still shows **limited cracking**, mostly near the start and stop of paving days. When comparing the saw & sealed section to the 2" direct overlay, inspectors stated that there was no increase in performance and would recommend **saving time and money** in the future.
